

Accessibility Audit

Forecasting Grid Prototype

TOTAL ISSUES FOUND

23

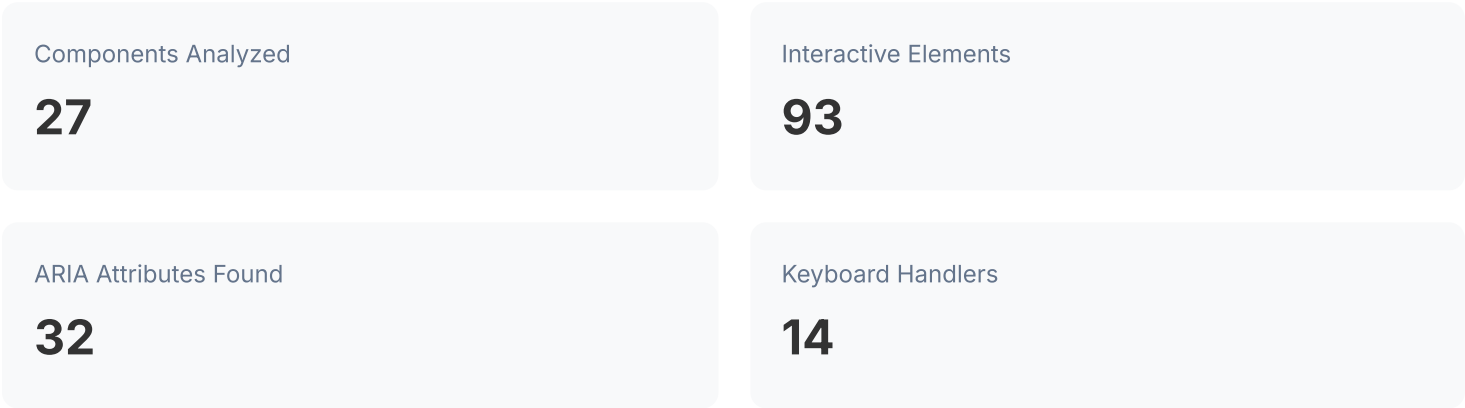

WCAG 2.1 AA Compliance Check

Generated: January 5, 2026

Executive Summary

Audit Statistics

WCAG 2.1 AA Compliance

- 1.1 Text Alternatives** — SVG icons missing accessible names
- 1.3 Adaptable** — Some semantic structure, missing landmarks
- 1.4 Distinguishable** — Color contrast issues in some areas
- 2.1 Keyboard Accessible** — Partial keyboard support (14/93 handlers)
- 2.4 Navigable** — Missing skip links, focus not always visible
- 3.1 Readable** — Lang attribute present, some text issues
- 4.1 Compatible** — Missing ARIA roles on custom components

Critical Issues (3)

Issues that block access for users with disabilities. Must fix before release.

1. Grid Cells Not Accessible via Keyboard

CRITICAL

WCAG 2.1.1

Grid data cells lack proper keyboard navigation. Users cannot Tab through cells or use arrow keys to navigate the grid.

Affected: HierarchicalGrid, DimensionsTimeGrid, TimeDimensionsGrid

Impact: Screen reader and keyboard-only users cannot access forecast data

```
// Current: No keyboard navigation <div className="grid-cell" onClick={handleClick}> //  
Required: Add tabIndex and keyboard handlers <div className="grid-cell" role="gridcell"  
tabIndex={0} onClick={handleClick} onKeyDown={handleKeyDown} aria-label={` ${measure} for  
${product} in ${month}: ${value} `} >
```

2. SVG Icons Missing Accessible Names

CRITICAL

WCAG 1.1.1

125 SVG icons found without accessible text. Screen readers announce nothing or "image" for these icons.

Affected: All icon buttons throughout the application

```
// Current: No accessible name <button><svg>...</svg></button> // Required: Add aria-label  
or title <button aria-label="Settings"> <svg aria-hidden="true">...</svg> </button>
```

3. Context Menu Not Keyboard Accessible

CRITICAL

WCAG 2.1.1

Right-click context menu cannot be accessed via keyboard. No keyboard shortcut or alternative method provided.

Affected: CellContextMenu.tsx

Fix: Add Shift+F10 or dedicated menu button for keyboard access

Serious Issues (7)

Issues that significantly impact usability. Should fix before release.

#	Issue	WCAG	Description & Fix
4	Missing Focus Indicators	2.4.7	Many interactive elements lack visible focus states. Only 33 :focus styles found for 93 interactive elements. Add outline or box-shadow on :focus.
5	No Skip Link	2.4.1	No "Skip to main content" link. Users must Tab through entire header/nav to reach grid. Add skip link as first focusable element.
6	Missing Landmark Roles	1.3.1	No <main>, <nav>, <aside> landmarks. Side panels should be <aside>, grid area should be <main>.
7	Form Labels Not Associated	1.3.1	59 <label> elements found but not all properly associated with inputs via htmlFor/id. Screen readers may not announce labels.
8	Modal Focus Trap Missing	2.4.3	ReorderMeasuresModal doesn't trap focus. Users can Tab outside modal while it's open. Implement focus trap.
9	No Live Regions	4.1.3	Status updates (e.g., "Last refreshed", cell edit confirmations) not announced. Add aria-live regions for dynamic content.
10	Color-Only Information	1.4.1	Edit history indicators, selection states use color alone. Add icons or text patterns for colorblind users.

Moderate Issues (8)

#	Issue	WCAG	Description
11	Color contrast below 4.5:1 in some text	1.4.3	Placeholder text (#999 on white) has ~2.8:1 ratio. Need #767676 or darker.
12	No error identification for invalid inputs	3.3.1	Input validation errors not announced to screen readers.
13	Heading hierarchy skipped	1.3.1	Some pages jump from h1 to h3, skipping h2.
14	Expandable rows missing aria-expanded	4.1.2	Hierarchy expand/collapse buttons don't indicate state.
15	Dropdown menus missing role="menu"	4.1.2	Custom dropdown components lack proper ARIA roles.
16	Tables missing scope attributes	1.3.1	Grid headers need scope="col" and scope="row".
17	Touch targets below 44×44px	2.5.5	Some icon buttons are 24×24px or 32×32px.
18	No visible current page indicator	2.4.8	Navigation doesn't clearly show current location.

Minor Issues (5)

#	Issue	WCAG	Description
19	Redundant link text "Click here"	2.4.4	Some links have non-descriptive text.
20	Missing autocomplete on form fields	1.3.5	Form fields could benefit from autocomplete attributes.
21	Animation without prefers-reduced-motion	2.3.3	Transitions don't respect motion preferences.
22	Missing page titles on route changes	2.4.2	Document title doesn't update on navigation.
23	Inconsistent button text casing	3.2.4	Mix of sentence case and title case in buttons.

Remediation Roadmap

Phase 1: Critical Fixes (1-2 weeks)

- Add keyboard navigation to grid (arrow keys, Enter to edit)
- Add aria-label to all icon buttons
- Implement keyboard access for context menu (Shift+F10)
- Add role="grid", role="row", role="gridcell" to data grid

Phase 2: Serious Fixes (2-3 weeks)

- Add visible focus indicators to all interactive elements
- Implement skip link navigation
- Add landmark roles (main, nav, aside)
- Associate all labels with form controls
- Implement focus trap in modals
- Add aria-live regions for status updates
- Add secondary indicators beyond color

Phase 3: Moderate & Minor Fixes (1-2 weeks)

- Fix color contrast issues
- Add aria-expanded to expandable elements
- Add proper ARIA roles to dropdowns
- Increase touch target sizes to 44×44px minimum
- Respect prefers-reduced-motion
- Update page titles on route changes

Testing Recommendations

Tool/Method	Purpose	Frequency
axe DevTools	Automated accessibility testing	Every PR
VoiceOver/NVDA	Screen reader testing	Weekly during development

Tool/Method	Purpose	Frequency
Keyboard-only testing	Verify Tab/Enter/Escape flows	Every feature
WAVE browser extension	Visual accessibility checking	Every page
User testing with disabilities	Real-world validation	Pre-release
